

Executive Summary – Ferns N Petals Sales Analysis

This project focuses on the development of an interactive Sales Analysis Dashboard for Ferns N Petals. The dashboard is designed to analyze transactional and customer data to generate meaningful insights that support business decision-making. It provides a comprehensive view of sales performance, customer behavior, product demand, and operational efficiency.

1. Project Objective

- To analyze overall sales performance across different dimensions such as time, category, and occasion
 - To identify high-revenue generating occasions and product categories
 - To understand customer purchasing patterns and spending behavior
 - To evaluate delivery performance and operational efficiency
 - To support data-driven decision-making for business growth
-

2. Data Overview

- The dataset includes order-level transactional data
 - Key attributes include order date, delivery date, product category, occasion, customer details, and city
 - The data is processed and visualized using business intelligence tools to generate insights
-

3. Key Performance Indicators

- Total Orders: 1000
 - Total Revenue: 3,520,984 dollars
 - Average Customer Spending: 3,520.98 dollars
 - Average Delivery Time: 5.53 days
 - Interpretation
 - The business shows strong revenue performance relative to the number of orders
 - The average order value is high, indicating premium or bundled product sales
 - Delivery time is moderate and can be optimized for better customer satisfaction
-

4. Revenue Analysis by Occasion

4.1 High-performing occasions

- Anniversary generates the highest revenue
- Raksha Bandhan and Holi also contribute significantly

4.2 Low-performing occasions

- Diwali shows comparatively lower revenue
- Valentine's Day performs below expectations

4.3 Interpretation

- Occasion-based demand plays a crucial role in revenue generation
- Marketing campaigns should prioritize high-performing occasions

- Underperforming occasions require improved promotional strategies and product alignment
-

5. Revenue Analysis by Product Category

5.1 Top-performing categories

- Colors generate the highest revenue
- Soft Toys and Sweets contribute significantly

5.2 Low-performing categories

- Mugs and Plants generate relatively low revenue

5.3 Interpretation

- High-performing categories indicate strong customer preference
 - Inventory planning should focus on high-demand products
 - Low-performing categories require repositioning, pricing strategies, or bundling
-

6. Revenue Analysis by Time of Order

6.1 Peak order hours

- Significant increase in orders during morning hours
- Another peak observed during evening hours

6.2 Low activity hours

- Midday and late-night periods show lower activity

6.3 Interpretation

- Customer purchasing behavior follows specific time patterns
 - Promotional campaigns and advertisements should be scheduled during peak hours
 - Staffing and logistics planning can be aligned with demand patterns
-

7. Monthly Revenue Trends

7.1 Highest revenue months

- February shows a major peak
- August records another significant spike

7.2 Moderate and low-performing months

- Remaining months show relatively stable but lower revenue

7.3 Interpretation

- Revenue is influenced by seasonal and occasion-based demand
- Business should prepare inventory and marketing campaigns in advance for peak months
- Off-season strategies are needed to maintain consistent revenue

8. Top Products by Revenue

8.1 Best-performing products

- Magnum Set generates the highest revenue
- Quia Gift and Dolores Gift follow closely

8.2 Interpretation

- High-performing products should be promoted through featured listings and advertisements
 - These products can be used in combo offers and cross-selling strategies
 - Product-level insights help in improving product portfolio decisions
-

9. Top Cities by Revenue

9.1 Leading cities

- Imphal contributes the highest revenue
- Kavali and Dhanbad are also key contributors

9.2 Moderate-performing cities

- Other cities show steady but lower contributions

9.3 Interpretation

- Regional demand varies significantly across cities
 - High-performing cities should be targeted with localized marketing campaigns
 - Expansion strategies can focus on regions with growth potential
-

10. Operational Insights

10.1 Delivery performance

- Average delivery time is 5.53 days
- Indicates scope for logistics optimization

10.2 Customer behavior

- High average spending suggests strong purchasing power
 - Customers prefer occasion-based and category-specific purchases
-

11. Business Recommendations

- Focus marketing efforts on high-revenue occasions such as Anniversary and Raksha Bandhan
- Increase inventory and promotions for top-performing categories like Colors and Soft Toys
- Improve strategies for low-performing categories through bundling and discounts
- Optimize delivery time to enhance customer satisfaction
- Use time-based insights to schedule promotions during peak hours
- Plan seasonal campaigns in advance for high-revenue months

- Strengthen presence in top-performing cities and expand in emerging markets
-

12. Conclusion

- The Sales Analysis Dashboard provides a comprehensive overview of business performance
- It enables identification of key revenue drivers and operational gaps
- The insights derived from the dashboard support strategic planning and decision-making
- The project demonstrates the effectiveness of data visualization in transforming raw data into actionable business intelligence
